REFLECTION #7 BLOCKLY GAMES

My First time in Blockly is very fun and its my first time to saw a game that its related to programming. It is very challenging and exciting every level although in the beginning I thought it was boring because in Puzzle I just use my common sense but when I go through the next game until Turtle that's how I find it hard to do but interesting and challenging in the end. In Blockly, I have learned other codes before I have learned it in class but there are still things that wasn't clear to in terms loops and arrays because when i was answering the game I just compare answer to the other level and trying something new or simply guessing just to complete the answer. Its like a trial and error to me so it not really that I have learned *many* things but I just simply enjoy it and know something.
