REFLECTION #6 FIRST HALF OF PROGCON

First Half of the PROGCON, it not much stress because there are activities that is enjoyable and exciting that won't make us bored. Unlike from my expectation, I have said that this PROGCON subject might be a boring because it's only tackled about related computer/ technology concept and it won't be like other that only work on notebooks and paper.

In the following day in PROGCON subject it turned out to be quite different from what I expected. We did a lot of Activities and Machine projects that helps me to understand how to make some programs and run it in flowgorithm. These programs are simple to think but somewhat difficult to do it in the flowgorithm because i'm not use to the signs or symbols of programming but using flowgarithm it helps me to check it if it would run a program. These images are my sample programs that i did on the first half of my PROGCON.
